شركة رؤيا للخدمات النفطية

طرابلس ليبيا
لندن، المملكة المتحدة

COMPANY DESCRIPTION & HISTORY

Ro'ya Petro Services Inc., specializes in the Libyan oil industry. The word Ro'ya means vision in Arabic. Ro'ya established in 2011 by a team of oil industry professionals to focus on providing Environmental Services to the Libyan Energy Sector. We specialize in **Environmental Remediation & Decontamination** and provide services to both the upstream and downstream markets. Since our founding we have expanded our **HSE** and **Environmental Services** beyond Bioremediation and Decontamination to include **Sludge Treatment, Tank Installation** and **Environmental Consultancy**.

Ro'ya Petro Services Inc., is headquartered in Tripoli, Libya and registered as a corporation under License Number 31176-40. We maintain an office in London UK, under the name **Ro'ya Petro Services Limited** (Company number: 109635345). Our London offices manage our Consortium operations with our international partners. .

ENVIRONMENTAL SORBENTS AND TREATMENT

Ro'ya provides high quality sorbents from Wildberry Environmental to treat and absorb a wide range of hydrocarbon spills. Ro'ya is the **exclusive representative** of Wildberry in Libya. Our sorbents are oleophilic (oil-attracting) and hydrophobic (water-repellent).

Natural organic sorbents: include peat moss, straw, hay, sawdust, ground corncobs, feathers, and other readily available carbon-based products. Organic sorbents can absorb between 3 and 15 times their weight in oil. **Natural inorganic sorbents:** consist of clay, perlite, vermiculite, glass wool, sand, or volcanic ash. They can absorb from 4 to 20 times their weight in oil.

Bioremediation: We work with a method of bioremediation which is transformation and not transportation. The cost of transformation is always lower and does not require specialized personnel or expensive equipment. Bioremediation is a new tool in dealing with hydrocarbon contaminants in this environmentally conscious world we live in.

Biorestitution: The restoring or bringing back to an original or near original state using living micro-organisms. Biorestitution harnesses the powers of nature to restore the environment.

Biostimulation: The process of engineering or manipulating a site or surface to enhance the growth of existing or added micro-organisms to do a desired function. Nature, in a short time will populate an area with micro-organisms to start a natural remediation process. Stimulation is used to speed up the remediation process. Biostimulation is the traditional approach. It is minimally effective because it relies on stimulating bacteria that “are already” in the soil.

Bioaugmentation: The adding of specific living forms to augment or help to reach the desired effect. Bioaugmentation is a recently perfected technology, surpassing all conventional methods. It uses large volumes of contaminant specific bacterial from outside the area to accomplish degradation. Bioaugmentation is much faster, more predictable and more cost effective than biostimulation because contaminant specific bacteria are introduced in quantities which exceed the natural population levels of the resident bacteria. These microbes are placed where needed. Integrated products now exist which provide the microbes with all the nutrients necessary to assist the microbes to rapidly multiply and consume the hydrocarbon.

Gator products as a range of absorbents made from cotton lint and recycled cellulose: there are 3 products to allow handling of hydrocarbon spillage and 1 product allowing handling of acids. Typical applications are used for the following sectors: petro-chemical, civil engineering, transports, hospitals & abattoirs, manufacturing, metallurgy.

Ro'ya Petro Services, Inc.

• Busita, Tripoli, Libya • London England

• Tel +218 91 776-5190 • +218 91 938-3173 • Fax +218 21 350-0230 • www.roya218.com • info@roya218.com

OUR SORBENTS

OIL GATOR: is a chemically modified cellulosic fiber containing all the necessary ingredients (Nitrogen, Sulfur, and Phosphorous) to enhance biodegradation of hydrocarbons by indigenous bacteria.

FLOOR GATOR: is a premium oil absorbent made from 100 % recycled waste products. Floor Gator will absorb up to six times its own weight. Floor Gator will encapsulate, suppresses vapors and eliminate residue left over by other absorbents. Floor Gator can be reused until fully saturated.

CELL-U-SORB: is a 100 % cellulose absorbent produced from recycled raw materials. It is harmless to plant, animal and aquatic life. Cell-U-Sorb will selectively absorb hydrocarbons from water while absorbing trace amounts of water for a cleaner surface (less sheen). Once Cell-U-Sorb has encapsulated a hydrocarbon it will float indefinitely for easy removal.

ACID GATOR: will absorb, encapsulate, suppress vapors and begin neutralization of acids in one easy step. Application of Acid Gator will begin neutralization without splattering, allowing the safe addition of a final neutralization agent to reach the desired pH.

Gator Sorbents

Absorbent products engineered for safe, fast and economical spill control.

4 products for specific applications:

OIL GATOR® – Nature's Way to Bioremediate Hydrocarbons

Oil Gator® is an "ALL NATURAL" biocatalyst.
Oil Gator® does not contain any manmade, cultured or genetically altered micro-organisms.
Oil Gator® is a USA patented product containing all the natural ingredients necessary to accelerate the indigenous microbes so they will rapidly degrade unwanted hydrocarbons into harmless carbon dioxide and water.
No harm will ever be done to the environment by the use of Oil Gator®.

← **OIL GATOR** – for hydrocarbon spillage on soil – allows in-situ bioremediation

FLOOR GATOR® – Premium Floor Absorbent

Floor Gator® is made from recycled manufacture or post consumer materials.
Floor Gator® will absorb up to 10 times its own weight.
Floor Gator® encapsulates, suppresses vapors and eliminates residue left over by other absorbents.
Floor Gator® can be reused until fully saturated and can then be incinerated with less than 3% ash residue.

← **FLOOR GATOR** – for hydrocarbon spillage on hard floor

CELL-U-SORB® – For Spills on Water

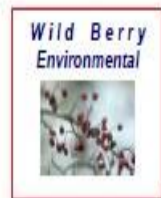

Cell-U-Sorb® is a 100% cellulose based hydrocarbon absorbent.
Cell-U-Sorb® is manufactured from recycled raw materials.
Cell-U-Sorb® will selectively absorb hydrocarbons from the surface of water while absorbing those amounts of water for a deicer surface (less steel).
Cell-U-Sorb® will absorb up to 11 times its own weight in hydrocarbons and can be incinerated with less than 3% ash.
Cell-U-Sorb® can also be mixed with Oil Gator® and composted.

← **CELL-U-SORB** – for hydrocarbon spillage on water

For more information please visit our website at www.roya218.com or contact:

← **ACID GATOR**
Allows neutralization & manipulation of acids

CERTIFICATION for CELL-U-SORB - Endorsement

From the Italian Environment Ministry - Dept of Territory and Marine Waters Protection

Translation

Re. Certification No. DPN-DEC-2009-531 dated 21 April 2009 granted by official Decree approving the suitability of the absorbent product called Cell-U-Sorb for use on marine waters.

We refer to the official approval of technical suitability for the use of the afore mentioned absorbent product requested on November 12, 2008. We enclose herewith a copy of the official decree No. DPN-DEC-2009-531 granted on April 21, 2009 for usage approval of the said product.

We state that this notice of certification has been forwarded to every Port Authority as well as REMPEC. This decree, which is published on the Gazzetta Ufficiale (Italian official government decree registration), is granted for a duration of three years as from April 21 2009 and will be renewable.

Subject

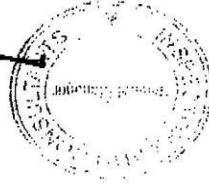

Dear sirs ..

Wild Berry Environmental Ltd. In UK is Known to us (petroleum and chemicals consultancy) in Libya from long time as supplier and services company in the field of pollution control for Oil sector.

It is worth mentioning that during last year Wild Berry Environmental ltd supplied some quantity of Oil Gator for Zawia Refinery company in Libya for testing at Bitumen plant it proves very good results for clearance of hydrocarbon pollutants .The test carried out by Eng. Zaied A. Eltif , Head of Environmental and Remediation Technology Email [.etif@yahoo.com](mailto:etif@yahoo.com)

ENVIRONMENTAL ASSESSMENT AND HSE MANAGEMENT

Ro'ya has maintained a *Collaboration Agreement* with **Borthwick & Associates** for many years, to provide state-of-the art Environmental assessment and surveys.

Borthwick and Associates is a leader in the environmental industry and has been involved with health safety and environmental management for 30 years. The team consists of environmental scientists, health and safety specialists, marine and legal experts, supported by associates from a wide range of specialist disciplines. We specialize in has conducted a wide variety of assignments including:

Risk Assessment And Environmental Impact Assessment: Whatever your existing operations or future plans, we can advise on all health, safety and environmental issues and potential risks, we offer practical advice on the control of such risks.

Environmental baseline surveys: We conduct EBS before any operations or activities commence to provide a baseline description of environmental conditions against which interactions of the project with the environment can be assessed. The baseline also provides a foundation for subsequent monitoring programs. The parameters requiring examination will depend on the habitats and resources in the vicinity of each project location, and to a large extent on the nature and scale of the activity, e.g. seismic acquisition, exploration drilling, development and operations.

Training: Training can be provided in all aspects of health, safety and environment, both in the classroom and “hands on” on site, at senior strategic levels, middle management and on the “shop floor”.

• Busita, Tripoli, Libya

• Tel +218 91 938-3173 • +218 94 543-3484 • Fax +218 21 350-0230 • www.roya218.com • taher@roya218.com

Emergency Response and Oil Spill Contingency Planning: Accidents and incidents cannot be eliminated, but the risk can be minimized. Our experience in the oil and gas industry can help you maintain the highest standards. The principal is to identify risk, examine controls and plan for the unexpected.

Integrated HSE Services

- HSE policy and strategy
- Integrated HSE management systems (ISO 14001 and OHSAS 18001)
- Risk assessment and management
- Environmental Baseline Surveys and Environmental Assessment
- Legislative and regulatory systems
- Operational procedures, work rules and permitting
- Materials and services management
- Contractor management systems
- Engineering and change management
- Crisis and emergency planning, response and exercise programmes
- Accident/incident reporting and investigation
- Planned inspections
- Review and audit operational and best industry practice and procedures
- Expert testimony, post-incident evaluation and review

Specialist Environmental Services

- Environmental Management Systems (ISO 14001)
- Environmental policy and strategy/Legislative and regulatory systems
- Environmental Baseline Surveys and Sensitivity Assessment
- Environmental risk and impact assessment
- Oil spill contingency planning, response and exercise programs
- Operational procedures, work rules and permitting
- Waste Management / Environmental Monitoring Systems
- HSE training

INTERNATIONAL CONSORTIUM

With the launch of our London Division, Ro'ya Petro Services Inc., established a Consortium with some of the world's leading Environmental Services companies, as Co-Venturers. Under the name **Ro'ya Petro Services Ltd.** we joined forces with leaders in the environmental petrochemical industry to broaden our areas of operation. Along with our two oldest partners **Wild Berry Environmental Ltd.** and **Borthwick & Associates**, we added two new partners to expand our services to **Sludge Treatment and Removal** as well as the **Petro-Manufacturing and Installation** and Manufacture of Storage Tanks

SLUDGE REMOVAL & TREATMENT

EPIQ-PETROLEUM ECOLOGY SERVICES

www.epiqgroup.com

Ro'ya works with EPIQ-Petroleum Ecology Services to provide effective and practical solutions to environmental problems using reliable, practical and safe technologies. EPIQ specializes in **removal, cleaning** and **treatment** of **oily sludge** from storage ponds and tanks, treatment of contaminated soil, containment and recovery of oil-water pollution, and emissions measurement and control.

EPIQ Group has been operating since 2006, providing contracting services for the oil industry and power generation sectors, predominately in the MENA region, including large and small oil tank and sump cleaning, oily sludge treatment, bio-remediation of contaminated soil, and waste chemicals disposal. Their services include: .

- Oily Sludge recovery and remediation from pits, ponds and lagoons, oil storage tanks and oil spills
- Tank cleaning, Industrial Waste Chemicals Disposal, Bioremediation
- Pollution mitigation from oil production and power generation facilities
- Facility construction and repairs including for large oil storage facilities, pipelines and associated works

PETRO MANUFACTURING & STORAGE TANKS

T3 Services.

www.t3services.com

Along with our other partners, we joined forces with **T3 Services**, a leading provider of large scale fabrication of steel, tanks, pressure vessels, and specialized equipment. T3 provides services all over the Far East, the Middle East, Europe. T3 manufactures and delivers more than 45,000 tons of steel per year. They specialize in the manufacture and installation of:

- API 650 & 620 Storage Tanks EPC Works
- Structural Steel EPC Works
- ASME Pressure Vessels Erection Works
- Industrial Electrical & Mechanical Works
- Industrial Surface Preparation & Painting Works
- Painting Quality Control Services
- Mechanical Quality Control Services
- Post-Weld Heat Treatment Services
- Cathodic Protection Services
- Operation & Maintenance Services
- API 653 Tank Repair Works
- Pneumatic & Electrical Works
